Lab for B.Sc. (IT) Second Year based on paper-II

Suggested List of Practical:

1. Write a servlet that prints "Hello World"

2. Write a servlet that knows to whom it's saying hello, This servlet must be called from an HTML page taking user name as input. (Use both get and post method)

3. Write a servlet that counts and displays the number of times it has been accessed since the last server reboot.

4. Write a servlet that counts the times it has been accessed, the number of instances created by the server, and the total times all of them have been accessed.

5. Write a servlet that counts and displays the number of times it has been accessed, and reads an init parameter to know what at what number to begin counting.

6. This servlet counts and displays the number of times it has been accessed, and saves the count to a file in its destroy() method to make the count persistent.

7. Write a servlet that searches for prime numbers above one quadrillion. The algorithm it uses couldn't be simpler: it selects odd-numbered candidates and attempts to divide them by every odd integer between 3 and their square root. If none of the integers evenly divides the candidate, it is declared prime. It's disabled to let the server's CPU handle important tasks.

8. Write a servlet that prints the name and value for all of its init parameters.

9. Write a servlet that displays information about its server (The process is called Snooping).

10. Write a servlet that snoops the server's servlet and Java version.

Notes: Student must write/run 50 programmes on their practical file & Computer lab.
